

# COVID-19 Vaccine Clinics

HealthDirect Has Begun Its First Round of COVID-19 Vaccination Clinics!

## Vaccine Delivery

Our first vaccine shipment was delivered on December 18th to our North Syracuse location (Store 60). Our Vermont location (Store 69) received an allocation directly from the state of Vermont on December 21st. Unpackaging and inspection of the containers started immediately to ensure that there was no damage to product, quantities were accurate, and we could begin monitoring the ultra-low temperature requirements for the Pfizer product.

## Clinic Deployment

Store 60 and 69 customers were the first to receive their vaccinations - both on the 21st of December. Each pharmacy supported two of their largest clients, administering over 550 doses on the initial day. Teams were prepared first thing in the morning to arrive at clinics for staging, production, debriefing clients, and then hitting the nursing-units to administer the vaccine to residents as well as personnel. The clinics were staffed by multiple immunizers as well as support teams to keep the session moving safely and efficiently.

## Much More to Come!

By the 28th of December, all HealthDirect locations in NY and VT will all be fully involved in their COVID-19 vaccination clinics. By Christmas we expect to administer over 1500 vaccines, by New Years another 3500, and by the end of our initial wave in the first full week of January we will have administered close to 9000 vaccines!

As supply of vaccine continues to grow and the phases of deployment evolve, we anticipate many more HealthDirect clients will have their clinics supported by our organization nationally. In NY and VT, Kinney Drugs will also play an vital role in assuring all of our customers and clients are able to choose us for their COVID-19 vaccinations.

This is a **historic** moment for our industry, a **pivotal** moment for our clients, and a very **proud** moment for our team of employee-owners!!
